ABOUT ME

Software engineer with full-stack experience building web, mobile, and backend systems end to end. Built and deployed applications integrating LLMs, RAG pipelines, and ML models alongside REST APIs, databases, and cloud infrastructure.

EXPERIENCE

Full-Stack Developer — Echelon Fit (Student Capstone)

Aug – Dec 2025

Full Sail University Fitness Technology Lab

Winter Park, FL

- Selected for capstone industry program replacing traditional graduation project with real-world development work.
- Built and shipped 4 UI components for Echelon Connect Reflect Touch smart mirror using Kotlin and Compose.
- Collaborated with design team using Zeplin to implement screen designs and user interface components accurately.
- Completed 4 feature tickets in Jira following an Agile workflow across dedicated branches with code reviews.
- Participated in weekly meetings with project manager to report on ticket status and development updates.

Student Tour Guide

May 2024 – Dec 2025

Full Sail University Touring Department

Winter Park, FL

- Led campus tours, trained new guides, and represented the university at open house events.

PROJECTS

Glasskyn — AI Skincare Companion App | React Native, FastAPI, LangChain, PyTorch

glasskyn.app

- Built LangChain RAG agent for ingredient safety, achieving 100% retrieval accuracy and 51% faster responses.
- Designed multi-tool agent for chat-driven routine generation, recommendations, and live modifications.
- Fine-tuned PyTorch/ResNet-50 classifier for product categorization, integrated into an OCR + image-fusion pipeline.
- Architected FastAPI backend with PostgreSQL, JWT auth, and AWS S3, containerized with Docker.

EasyCook — Recipe & Meal Planning Web App | React, TypeScript, Node.js, REST APIs, VPS

easy-cook.linettekuhn.com

- Developed personal cooking assistant for recipe lookup, meal planning, and pantry tracking.
- Built REST API with 12 endpoints handling authentication, recipe lookup, meal planning, and pantry management.
- Used React for front-end UI components and Express.js to connect Spoonacular API and database services.
- Deployed backend on VPS, reducing load times from 50 seconds to near instant after user feedback.

TCP Chat App — Real-Time Messaging Platform | C++, React, TypeScript, Express.js

chat.linettekuhn.com

- Built C++ TCP server using select()-based multiplexing with a custom length-prefixed binary protocol.
- Implemented 7 server commands including auth, messaging, user listing, and persistent chat logging.
- Bridged React front-end to C++ server via Express.js middleware with child process spawning and SSE streaming.
- Configured GitHub Actions CI/CD pipeline to automatically build and deploy to VPS via Docker and Nginx.

EDUCATION

Bachelor of Science in Computer Science (B.S.)

Sep 2023 – Dec 2025

Full Sail University

Winter Park, FL

- GPA: 3.99 | Class Valedictorian
- Awarded Women in Tech full-tuition scholarship

TECHNICAL SKILLS

- Programming Languages:** C++, Python, TypeScript, JavaScript, Kotlin
- Frameworks:** React, Vite, Expo, React Native, Jetpack Compose, Express.js, FastAPI, LangChain
- Backend & Database:** Node.js, PostgreSQL, SQLite, SQL, REST APIs, Docker, AWS (EC2, S3), ChromaDB, PyTorch
- Web Technologies:** HTML, CSS, Framer Motion, GSAP
- Testing & Tools:** Git, GitHub Actions, Jest, Postman, Linux, Figma, DigitalOcean, Zeplin, Jira, AI coding agents
- Spoken Languages:** Spanish (native), English (fluent)
